What Arrighi Meant by Method in Sirohi

By Shomit Sirohi

I. Small Empirical Facts –

Vinegar labour, olive culture, herbs of oil, several such barley fields, network of commodities modelling this into an agrarian process which integrates with merchant trade which forms a history of company linkages to the world of agriculture which then is several symmetries to labouring processes which has to be modelled in diagrams –

Triangular process – Europe, Africa, Latin America and parts of plantation America.

Metropolitan core from that process which has periphery and semi-peripheries.

Modelling together one arrives at historical capitalism (thesis here – give it a title – Long History of Genoese Traditions)

II. Converting process – statistics

Now produce a complex statistical model which then produces another complex articulation – labour, social history, rural studies and even broad theses of Long Duree. Broad movements from American School and Marxism as well.

III. Modelling it again

Kantianism in Wallerstein again –

Example –

International financial trade, race history and nationalism which then integrates the process of labour into broad movements – the movement of trade is also agrarian trade which is finally modelled again into race as a factor of development of Europe and America which then produces a movement of symphony as jazz on the process of modelled again of financial histories from Genoa based again on race which though is commercial trade with several linkages to all modelled –

IV. Braudel Thesis

Long durees from material institutions based on ecology especially as history – the Mediterranean.

Example –

Commercial capitalism based on mediterrranean trade.

V. Now a Healthcare Argument from Sirohi and Cornel West

Broad strokes of race as in fact belonging to a long history of exploitation which accumulates as metropolitan core and peripheries – which then means a stroke again is actually international finance which then sweeps history and becomes a world analysis.

World Criticism then –

Health is Mediterranean – a Long process and in fact a ecological process – it is just part of nature, to be interested then in Marx's ecology – that natural ecological rhythms are wedded to capitalism – this metropolitan core development ignores the ecological truth of Marx – that nature is pure infinity and is a form of Mediterranean health.

A Mediocre Argument – the Marxists – what about political revolution and cultural revolution and even real Kiekegaardianism.

Cornel West – on the debate – I argue that health is definitely ecological health like in fact being in the hills when in distress is better and with company – collectives which are organised in communication –

Diagnosis – in my case recently delirium

Cure – Better as physician in the hills as it is called – which means actually utopian conditions I have visited and lived.
